DATA ANALYST | BI DEVELOPER

PROFESSIONAL SUMMARY:

- Data Analyst and BI Developer with 5+ years of experience transforming large structured and unstructured datasets into actionable business insights across healthcare, financial services, and manufacturing industries. Expert in Power BI dashboard development, advanced DAX, and SQL with hands-on application of AI/ML techniques including predictive modeling, anomaly detection, and statistical forecasting to drive data-driven decision making. Delivered measurable outcomes including \$850K in revenue cycle discrepancy recovery, 81% pipeline efficiency improvement, and 35% reduction in reporting errors across enterprise analytics environments.

TECHNICAL SKILLS:

- **Analytics and Reporting:** SQL (advanced queries, CTEs, stored procedures, window functions, query optimization), Python (pandas, NumPy, scikit-learn, data preprocessing, statistical analysis, predictive modeling), Excel (pivot tables, VLOOKUP, macros, Power Query), A/B testing, root cause analysis, trend analysis, forecasting
- **Business Intelligence and Visualization:** Power BI Desktop and Service (interactive dashboards, reports, dataflows, DAX, semantic modeling, row-level security, deployment pipelines), Tableau, Looker, Google Data Studio, Cognos, Alteryx, data storytelling, KPI scorecards, executive reporting
- **AI and Machine Learning Concepts:** Machine learning model application (regression, classification, clustering), predictive analysis, anomaly detection, pattern recognition, statistical modeling, data-driven forecasting, hypothesis testing, A/B testing, cohort analysis, customer segmentation
- **Data Platforms and Cloud Technologies:** Snowflake, Azure Synapse Analytics, BigQuery, Amazon Redshift, Azure Data Factory, SQL Server, Oracle, SAP HANA, cloud-based analytics platforms
- **Data Management:** Data modeling, ETL and ELT processes, data quality validation, data cleansing, data governance, metadata management, compliance reporting, HIPAA standards, dimensional modeling
- **Collaboration and Project Tools:** Agile Scrum, Jira, Confluence, SharePoint, Microsoft Teams, Azure DevOps, ServiceNow, stakeholder requirements gathering, cross-functional collaboration

PROFESSIONAL EXPERIENCE:

MD Anderson Cancer Center Jan 2025 to Present

Sr. Data Analyst

- Analyzed large volumes of structured clinical and financial data spanning 15+ integrated source systems to surface revenue cycle performance gaps, identifying \$850K in underbilled services and recommending process changes that increased claim approval rates by 12%, directly influencing executive decisions on resource allocation and patient flow optimization.
- Developed 20+ interactive Power BI dashboards with advanced DAX measures, row-level security, and star schema data models, giving 200+ stakeholders including C-suite executives real-time visibility into operational KPIs, patient volume trends, and financial performance metrics across all major departments.
- Applied predictive analysis and trend modeling techniques using Python and statistical forecasting methods to project patient volume fluctuations and revenue patterns, enabling proactive capacity planning decisions that reduced resource bottlenecks by 18% over two quarters.
- Collaborated with finance, operations, and compliance business stakeholders to gather reporting requirements, translating complex data needs into structured analytical solutions aligned with HIPAA compliance standards while reducing report preparation time from 8 hours to 90 minutes through Azure Data Factory automation.
- Wrote optimized SQL queries, stored procedures, and CTEs against clinical and billing databases to extract, clean, and transform data for downstream Power BI consumption, cutting dashboard query execution time from 40 minutes to under 15 minutes through indexing and execution plan tuning.
- Leveraged AI-assisted anomaly detection techniques to identify over 10,000 monthly data discrepancies across billing and claims systems, implementing automated validation rules that improved overall data accuracy by 35% and built measurable stakeholder trust in reporting outputs.

- Designed executive KPI scorecards tracking 50+ metrics tied to patient satisfaction, treatment outcomes, and operational efficiency, translating complex healthcare data into clear visualizations and narratives that supported budget planning, regulatory submissions, and strategic decisions contributing to \$2.3M in annual cost savings.
- Mentored junior analysts on SQL best practices, Power BI development, and data storytelling techniques, improving team delivery throughput and standardizing analytical methodologies that became the department-wide baseline for reporting quality.

PACCAR May 2024 to Dec 2024

Data Analyst

- Examined manufacturing operational data across 8 global facilities to identify \$1.2M in annual cost savings through supplier performance gaps, production bottleneck analysis, and inventory inefficiency patterns, presenting findings to executive leadership with structured, actionable recommendations that reduced delays by 18%.
- Built interactive Power BI dashboards with advanced DAX calculations providing real-time visibility into production throughput, on-time delivery rates, quality defect trends, and inventory turns, empowering operations managers to make faster data-driven decisions at the plant level without relying on manual reporting cycles.
- Applied trend analysis and predictive modeling on production sensor and maintenance data to forecast equipment failures before they occurred, enabling maintenance teams to reduce unplanned downtime by 22% and improve overall equipment effectiveness scores by 15% within two quarters.
- Consolidated reporting from 15+ disparate ERP and manufacturing systems into a centralized SQL-based analytics layer using Azure Data Factory, establishing a single source of truth for operational KPIs and cutting data reconciliation time by 50% across all business units.
- Conducted monthly variance analysis on labor costs, materials usage, and production efficiency using SQL and Python, surfacing \$600K in waste reduction opportunities that operations leadership implemented within the same quarter following structured data presentations.
- Developed supplier scorecards with advanced DAX measures and performance trend indicators, equipping procurement teams with data that supported vendor negotiations and directly achieved 8% material cost reductions across key supply categories.
- Automated weekly operational reports using Azure Data Factory scheduling and SQL stored procedures, replacing a 6-hour manual compilation process with a 30-minute automated pipeline that delivered consistent, accurate insights to 300+ business users.
- Collaborated with cross-functional stakeholders in engineering, procurement, and finance to translate business reporting needs into scalable analytical solutions, building comprehensive data model documentation that reduced troubleshooting time by 40% and improved team knowledge continuity.

Square / Block Jan 2023 to May 2024

Data Analyst

- Analyzed 500M+ daily payment transaction events using SQL and Python to uncover customer behavior patterns and pricing optimization opportunities, delivering insights that contributed to a 7% increase in gross payment volume and directly shaped commercial growth strategy for product and finance leadership.
- Built interactive Power BI and Looker dashboards over Snowflake and BigQuery datasets, processing large-scale financial data and reducing ad hoc reporting requests by 45% through self-service infrastructure that empowered 12+ finance, compliance, and operations teams to independently explore business KPIs.
- Applied cohort analysis and statistical segmentation techniques in Python to model merchant retention drivers, churn risk patterns, and lifetime value trends, providing actionable insights that shaped marketing campaign priorities and contributed to a measurable merchant retention improvement of 7%.
- Optimized SQL queries and data models across Snowflake and BigQuery, achieving a 35% reduction in cloud compute costs while improving dashboard load performance by 50%, demonstrating ability to balance analytical depth with platform cost efficiency at scale.
- Evaluated A/B test results for product experiments measuring feature adoption, conversion impacts, and engagement metrics, synthesizing findings into executive presentations that directly influenced product roadmap decisions for senior leadership.

NXT GO Feb 2020 to Jun 2022

Data Analyst

- Examined user behavior, campaign performance, and revenue patterns across CRM, marketing, and transactional datasets using SQL and Python, recommending targeted strategies that increased customer retention by 12% and improved marketing ROI by 25% over an 18-month period.
- Designed 25+ self-service Tableau and Power BI dashboards for customer segmentation, funnel analysis, and revenue tracking, reducing ad hoc reporting requests by 60% and driving stakeholder adoption to 80% within 6 months by translating complex data into accessible visual narratives.
- Accelerated reporting cycles by automating daily data refresh workflows using Python and SQL, shifting from weekly to daily updates and reducing data lag by 40% for time-sensitive business decisions while improving overall reporting reliability for 50+ business users.
- Unified data from marketing platforms, CRM systems, and transactional databases into a consistent SQL-based analytics foundation, eliminating data silos and enabling cross-functional teams to work from a single, governed source of truth for strategic decision making.
- Investigated conversion funnel drop-off points through detailed trend analysis of website traffic and engagement metrics, leading to UX improvements that boosted conversion rates by 15% and validated through ongoing A/B testing and cohort studies.

CERTIFICATIONS:

- Tableau Desktop Specialist
- AWS Certified Solutions Architect (Associate)
- Cisco Data Analyst Essentials

EDUCATIONAL DETAILS:

Master of Science in Computer Science | Campbellsville University

Bachelor of Technology in Information Technology | Vasireddy Venkatadri Institute of Technology
